

Dear deeply esteemed editor-in-chief of Ukrainian Journal of Physics, President of NAS of Ukraine, Academician Anatoly G. Zagorodny,

I am pleased to submit an original research article entitled “**The informational physical model – Nuclear Force**” for consideration to publish in your journal.

This paper presents the initial physical model of the fundamental Nature Nuclear force that binds nucleons in nuclei in framework of the whole Planck scale informational physical model, two main papers are <https://doi.org/10.48550/arXiv.0707.4657> and <http://dx.doi.org/10.20944/preprints202110.0453.v4> , which is based on the philosophical “The Information as Absolute” concept <http://arxiv.org/abs/1004.3712> that was developed mainly in 2007-22 years.

In the concept it is **rigorously proven** that nothing exists besides some informational patterns/systems of the patterns that are elements of the absolutely fundamental, and absolutely infinite, “Information” Set; including Matter, and everything in Matter, are only some informational patterns/systems – elements of the Set. That allowed to define scientifically practically all fundamental – “Meta-Physical” – phenomena/notions in physics, has made the outstanding von Weizsäcker and Fredkin-Toffli hypotheses completely natural in physics; and, basing on the concept and the hypotheses, to solve, or essentially to clarify, a number of fundamental physical problems, including to develop initial models of fundamental Nature Gravity and Electric forces, which act in a few traits as that is in the presented here Nuclear Forces’ model.

The paper contains undoubtedly new fundamental physical results, which are in full accordance with all existent reliable experimental data; and is actual, since it essentially finalizes the whole physical model above, which is essential contribution into further physics development on the way “classical physics – QM – Planck scale physics”. The submission is in full accordance with the journal Aims and Scope, and so the authors hope that it will be published in your respectful journal.

Thank you for your consideration,
best regards,
sincerely,
Kph-m n Sergey Shevchenko

Relating to the requirement to point 3 reviewers for non-blind reviews – that is some non-scientific requirement that exists in journal for some non-scientific reasons, as, say, that clearly pointed in the Guide for Authors in some journal:

“...In the submission portal, you must provide the names, affiliations, and e-mail addresses of five potential reviewers; you may provide contact details for up to three excluded reviewers. These suggestions will not necessarily be used by editors, but they will be referenced as an indication of the authors' view of the research landscape of the submitted work.”

- the scientific landscape of any really scientific paper is pointed in its reference list, and by no means that are names, affiliations, and e-mail addresses of any people.
